How to Upload HDMI Firmware onto N-SP80MS1

This special firmware "hdmi_display.cfg" allows transmitting audio and video signal out to an external device such as a monitor display or a video recorder through an HDMI cable connected to the HDMI port on the N-SP80MS1 even during conversations. Without using this firmware, the audio and video signal cannot be output through an HDMI cable during conversations.

How to upload the firmware;

Step 1: Access to the browser menu of N-SP80MS1

Step 2: You can find the Config File upload section on the very bottom of "Upgrade > Advanced" menu.

Step 3: Choose the "hdmi_display.cfg" file to upload then click "Import".

Step 4: Once the upload is completed successfully, click "Reboot" to reboot the unit to restart operation.
