

IP-A1 & Teams integration

» What can be done with IP-A1 and Teams

1. Broadcast from Teams to IP-A1

Live broadcasts can be made from Teams app through IP-A1 by using SIP protocol.

2. Multicast broadcast from Teams through IP-A1PG

Multicast port number can be specified to select a broadcast zone/area.

3. Calls from IP-A1 to Teams

By connecting a microphone switch panel to the microphone and contact input of IP-A1AF/PC580R/PC580S, a call can be placed from the IP-A1 device to Teams for having a half-duplex conversation.

» How to integrate IP-A1 with Teams

This Teams integration can be achieved by using the middleware called "CyberGate for Intercom" provided by CyberTwice.

- Download and install at "**Microsoft Appsource**" website.
- Subscription fee for required for client: **\$24.95/month or \$269/year per device**
- The configuration manual for the Cybergate side is available on the CyberTwice web (<https://www.cybertwice.com/toa>)
